## What repository hosting service does Codeversation use?

The Codeversation project uses Git as its SVC and is hosted via Github.

## How do I view the Codeversation team's repository

Our project repositories are located at <https://github.com/codeversation>.

## How do I get permissions to view the project?

You don't need to! The repositories in the Codeversation Organization are all totally public/open source.

## Where do the documents/artifacts live?

All the most up to date documents for the Codeversation project can found in the master branch of the <https://github.com/codeversation/codeversation-isomorphic-server> repository in the artifacts folder.

## What's up with the artifact's .md format?

The documents stored on our github are in the [Markdown](#) format. Markdown is a convenient way to create pretty looking documents that render to HTML. Github will automatically render Markdown files when viewed from there site.
