

# Codeversation:

## Sprint 3 Retrospective

---

CS 307 - Software Engineering - Team 23

Alex Aralis, Patricia Chun, Jeremy Lehman, Zach Perry

## What went well during this sprint:

1. Collaboration
  - a. We collaborated well and finished all of our stories
  - b. We also were able to finish the leftover tasks from sprint
2. Production Server
  - a. We were able to get everything up and running properly on our production server with our main functionality intact.
3. Prioritization
  - a. We made sure to do the necessary work first.
4. Presentation
  - a. Time was well managed.
  - b. All the core features of our app were clearly displayed.
  - c. Questions were answered satisfactorily.

## What went poorly during this sprint:

1. Trello was sometimes disregarded
  - a. We had some problems accidentally working on similar problems during this sprint because not everyone was picking up tickets on trello.
2. Data persistence
  - a. We had some problems with adding new backend data, which caused some persistence problems. We ended up making some major data structure changes, and didn't thoroughly iron out the changes on the front end
3. Time management
  - a. We ended up having to rush a bit to finish up the final sprint in the final week. Due to some of the data persistence problems, this almost led to not finishing.

How can the team improve for the next sprint (if there was another sprint):

1. More Frequent Meeting
  - a. We didn't meet as much this sprint, which led to some deficiencies in communication
2. Use Trello more effectively
  - a. This sprint, we mostly disregarded trello and it led to some people working on similar items.
